Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.	

Item	Question	Reply	Soundness Tests

4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

Summary:																

Item	Question	Representation Text	
1 2	Issue Summary		
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.		
2 3	Representation text		
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.		
4 5	Changes sought		
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.		
8 7	Previous Representation No		
	Our representation is being made during the current public consultation period (5th February - 26 March 09)		
21 11	Why attend Examination?		
	There is not sufficient space within this form to do justice to our objections.

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

Summary:															

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

Summary:																

Item	Question	Representation Text	
1 2	Issue Summary		
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.		
2 3	Representation text		
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.		
4 5	Changes sought		
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.		
8 7	Previous Representation No		
	Our representation is being made during the current public consultation period (5th February - 26 March 09)		
21 11	Why attend Examination?		
	There is not sufficient space within this form to do justice to our objections.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

Summary:

Item	Question	Representation Text
2	3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4	5	Changes sought RNAText The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:															

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

<i>Rep'n No</i>	<i>Accssn No</i>	<i>Date Lodged</i>	<i>Late?</i>	<i>Source Type</i>	<i>Mode</i>	<i>Status</i>	<i>Modified</i>	<i>Petition of</i>	<i>TREAT in parts</i>	<i>EVIDENCE Add'l</i>	<i>NO FRTHR EVID. SA/SEA</i>	<i>Repr Council</i>	<i>Officer</i>	<i>Recommendation</i>	<i>Response</i>
20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Policy: AW 14 Map: Issue: Minerals

Summary:

Item	Question	Representation Text
2	3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4	5	Changes sought RNAText The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item Question	Representation Text
2 3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4 5	Changes sought The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item Question	Reply	Tick box Replies
3 4	Seek changes? Any changes to be made to the Plan?	Yes

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Item	Question	Representation Text	
1 2	Issue Summary		
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.		
2 3	Representation text		
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.

Summary:															

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

Summary:															

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Item	Question	Representation Text	
1 2	Issue Summary		
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.		
2 3	Representation text		
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.		
4 5	Changes sought		
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.		
8 7	Previous Representation No		
	Our representation is being made during the current public consultation period (5th February - 26 March 09)		
21 11	Why attend Examination?		
	There is not sufficient space within this form to do justice to our objections.		
Item	Question	Reply	Soundness Tests

The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan
<p>Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.</p> <p>'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).</p> <p>'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).</p> <p>The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.</p> <p>It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.</p>

Summary:																	

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

<i>Rep'n No</i>	<i>Accssn No</i>	<i>Date Lodged</i>	<i>Late?</i>	<i>Source Type</i>	<i>Mode</i>	<i>Status</i>	<i>Modified</i>	<i>Petition of</i>	<i>TREAT in parts</i>	<i>EVIDENCE Add'l</i>	<i>NO FRTHR EVID. SA/SEA</i>	<i>Repr Council</i>	<i>Officer</i>	<i>Recommendation</i>	<i>Response</i>
20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.	

Item	Question	Reply	Soundness Tests

There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:

Item	Question	Representation Text
2	3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4	5	Changes sought RNAText The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:

Item	Question	Representation Text
2	3	Representation text
<p>The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.</p>		
4	5	Changes sought
<p>RNAText</p> <p>The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.</p>

The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.		
4 5	Changes sought	
The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item	Question	Representation Text	
1 2	Issue Summary		
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.		
2 3	Representation text		
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.		
4 5	Changes sought		
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.		
8 7	Previous Representation No

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

Summary:																	

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Policy: AW 14 Map: Issue: Minerals

Summary:

Item	Question	Representation Text
2	3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4	5	Changes sought RNAText The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Summary:															

Item Question	Representation Text
2 3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4 5	Changes sought The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item Question	Reply	Tick box Replies
3 4	Seek changes? Any changes to be made to the Plan?	Yes

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:															

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

Policy: AW 14 Map: Issue: Minerals

Summary:

Item	Question	Representation Text
2	3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4	5	Changes sought RNAText The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No

*Item Question*

**Representation Text**

2 3 Representation text

I am deeply concerned to hear of the plans to expand this quarry even further. I have lived in this house since it was built in 1972, 37 years ago, and spent 25 years of my life paying a mortgage for it. Have these quarry people no consideration for the feelings of the many people who live in the Area? We have suffered enough over the years from dust, noise and blasting. I telephoned the quarry on 01-05-08 after a particularly heavy blast which shook my house and rattled the windows. I was told that it was the way the blast had travelled through the ground - I think I already new that. I was also told that someone would call in a few days time, no one called. Permission should not be given from where they are at present for any further expansion. The quarry was expanded some years ago and I believe an assurance was given then that no further expansion would be made. If this proposed extension is allowed it will be intolerable for many people apart from the worry and anguish which we will all have to suffer in the meantime with this threat hanging over us.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

Summary:																

Item	Question	Representation Text	
1 2	Issue Summary		
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.		
2 3	Representation text		
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.		
4 5	Changes sought		
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.		
8 7	Previous Representation No		
	Our representation is being made during the current public consultation period (5th February - 26 March 09)

'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)

Summary:																	

Item	Question	Representation Text	
1 2	Issue Summary		
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.		
2 3	Representation text		
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.		
4 5	Changes sought		
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.		
8 7	Previous Representation No		
	Our representation is being made during the current public consultation period (5th February - 26 March 09)

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:																

Item	Question	Representation Text	
1 2	Issue Summary		
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.		
2 3	Representation text		
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.		
4 5	Changes sought		
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.		
8 7	Previous Representation No		
	Our representation is being made during the current public consultation period (5th February - 26 March 09)

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

Policy: AW 14 Map: Issue: Minerals

Summary:

Item	Question	Representation Text
2	3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4	5	Changes sought RNAText The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. 20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

Summary:																	

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.	

Item	Question	Reply	Soundness Tests

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:

Item	Question	Representation Text
2	3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4	5	Changes sought RNAText The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. <p>The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.</p>		
4	5	Changes sought
<p>RNAText</p> <p>The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.</p>

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:																

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.

<i>Rep'n No</i>	<i>Accssn No</i>	<i>Date Lodged</i>	<i>Late?</i>	<i>Source Type</i>	<i>Mode</i>	<i>Status</i>	<i>Modified</i>	<i>Petition of</i>	<i>TREAT in parts</i>	<i>EVIDENCE Add'l</i>	<i>NO FRTHR EVID. SA/SEA</i>	<i>Repr Council</i>	<i>Officer</i>	<i>Recommendation</i>	<i>Response</i>	
20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)

20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Item Question	Representation Text
2 3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4 5	Changes sought The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item Question	Reply	Tick box Replies

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)

<i>Rep'n No</i>	<i>Accssn No</i>	<i>Date Lodged</i>	<i>Late?</i>	<i>Source Type</i>	<i>Mode</i>	<i>Status</i>	<i>Modified</i>	<i>Petition of</i>	<i>TREAT in parts</i>	<i>EVIDENCE Add'l</i>	<i>NO FRTHR EVID. SA/SEA</i>	<i>Repr Council</i>	<i>Officer</i>	<i>Recommendation</i>	<i>Response</i>
20	9	Why changes satisfy Soundness Give details why the changes you propose will ensure that the Plan													
Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations.															
'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version).															
'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version).															
The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change.															
It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Item	Question	Representation Text
1 2	Issue Summary	
	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	
	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.	
4 5	Changes sought	
	To remove the designated area for mineral extraction from the site, which is adjacent to Glyncoch, allowing the quarry to expand further. For the site to be designated instead, as a community amenity, enabling residents to access the countryside through links with the nearby designated nature reserve, as well as to develop an outdoor activities and natural environmental learning zone. Alternative proposals developed by local people will facilitate economic, social and environmental regeneration and the genuinely holistic, sustainable development of the Glyncoch community as well as RCT CBC.	
8 7	Previous Representation No	
	Our representation is being made during the current public consultation period (5th February - 26 March 09)	
21 11	Why attend Examination?	
	There is not sufficient space within this form to do justice to our objections.

Item	Question	Representation Text	Soundness Tests
1 2	Issue Summary	Objection to designation of area of land surrounding Glyncoch for extraction of minerals.	
2 3	Representation text	The expansion of Craig yr Hesg quarry will lead to further noise and disruption to the residents of Glyncoch, exacerbate air quality and threaten the structure and integrity of the primary school as well as nearby housing. The designated area for mineral extraction is just 138.75 meters (sic) from the nearest house, 160 meters (sic) from the local primary school and just 123 meters (sic) from the primary school's outdoor classroom. A large number of local residents have expressed health and safety concerns. The current fencing surrounding the quarry is faulty and with easy access for children, this would be of greater concern, should the quarry be expanded. There is also inadequate infrastructure for the transportation of minerals. The current quarrying levels have a negative impact on the quality of life of local residents. An expansion of the quarrying activity would be intolerable.

20	9			Why changes satisfy Soundness												Give details why the changes you propose will ensure that the Plan Our proposals are much more consistent with the Wales Spatial Plan's commitment to supporting the economic development of communities without compromising environmental and social considerations. 'Our future depends on the validity of our communities as attractive places to live and work. We need to reduce inequalities between communities whilst retaining their character and distinctive ness' (WAG: Wales Spatial Plan (2008) pp29 (Word version). 'The quality of our natural environment has an intrinsic value as a life support system, but also promotes wellbeing for living and working and contributes to our economic objectives. Safeguarding and protecting our natural and historic assets, and enhancing resilience to address the challenges of climate change, will enable us to attract people to our communities and provide the wellbeing and quality of life to encourage them to stay and preserve the foundations for the future' (WAG: Wales Spatial Plan (2008) pp38 (Word version). The plan does not consider the Glyncoch Partnership's proposals which are focused upon enhancing the designated area of land for access to the Graigwen Nature reserve, as well as a host of projects to enhance the health and wellbeing of residents, support out door learning as well as community resilience to climate change. It is also important to point out that the settlement boundary surrounding Glyncoch does not include Cefn Primary School, whereas it does include other schools in Rhondda Cynon Taff.

Summary:

Item	Question	Representation Text
2	3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4	5	Changes sought The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item Question	Representation Text
2 3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4 5	Changes sought The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item Question	Reply	Tick box Replies
3 4	Seek changes? Any changes to be made to the Plan?	Yes

Item Question	Representation Text
2 3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4 5	Changes sought The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item Question	Representation Text
2 3	Representation text Concerned that it is too close to the housing. Concerned for child safety. Concern for noise and dust levels. Concerned for the environment considering it will potentially become a landfill site. This will then be a bad selling point on different plots due to the unsightliness of the area. There is damage to my property in the walls and on Thursday lunchtime my flat shakes and the floorboards creek and pipes and radiators bang quite loud.

Item Question	Representation Text
2 3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4 5	Changes sought The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item Question	Representation Text
2 3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4 5	Changes sought The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item Question	Representation Text
2 3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4 5	Changes sought The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item Question	Representation Text
2 3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4 5	Changes sought The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item Question	Representation Text
2 3	Representation text The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.
4 5	Changes sought The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.

Item Question	Representation Text
2 3 Representation text	
The proposals indicate that the quarry will be extended within 160 meters (sic) of the nearest residential property and 165 meters (sic) of Cefn Primary school. I am deeply concerned about the blasting at the quarry and how it may compromise the structural integrity of our local school and homes.	
4 5 Changes sought	
The Glyncoch Community partnership wish to develop this area of land for pathways to link Glyncoch with Loops and Links paths as well as having a more pleasant walking route to Pontypridd town centre. The proposals would also give us a link to the out door classrooms in the woodland adjacent to Graigwen. These proposals are much more consistent both with the meets (sic) of the Glyncoch community and our aspirations to be a healthy active community and a highly educated community that cares about our local environment.
